C.B.S.E. Percentage : 74.4%

PROJECTS

- Employee Performance Mapping**
Project Description :-
Designed and implemented an Employee Database Management System using SQL. Performed data import, schema design, and created an ER diagram. Developed complex queries involving filtering, joins, unions, window functions, and aggregations to analyze employee data. Implemented views, stored procedures, functions, and indexing to optimize performance and automate tasks such as salary analysis, employee ranking, and role validation.

- Healthcare Management: Patient Readmission Prediction**
Project Description :-
This healthcare management document explores strategies for improving patient outcomes, optimizing resource allocation, and enhancing operational efficiency. It emphasizes evidence-based practices, data-driven decision-making, and integrated care models. The content highlights leadership roles, policy frameworks, and technology adoption, aiming to strengthen healthcare delivery systems and ensure sustainable, patient-centered management approaches.
